# New Training Product Scenario

- ◇ We have a training need
- ◇ We want to track student learning performance
- ◇ Should we use SCORM?
- ◇ xAPI is the solution

# xAPI Challenges for DoD Training

- ◆ Existing Learning Management System (LMS), but no Learning Record Store (LRS)
- ◆ Have an LRS, but no one to maintain it
- ◆ Have an LRS, but not FedRAMP approved at the proper ATO level
- ◆ Have everything in place, but no policy or procedure for sending statements

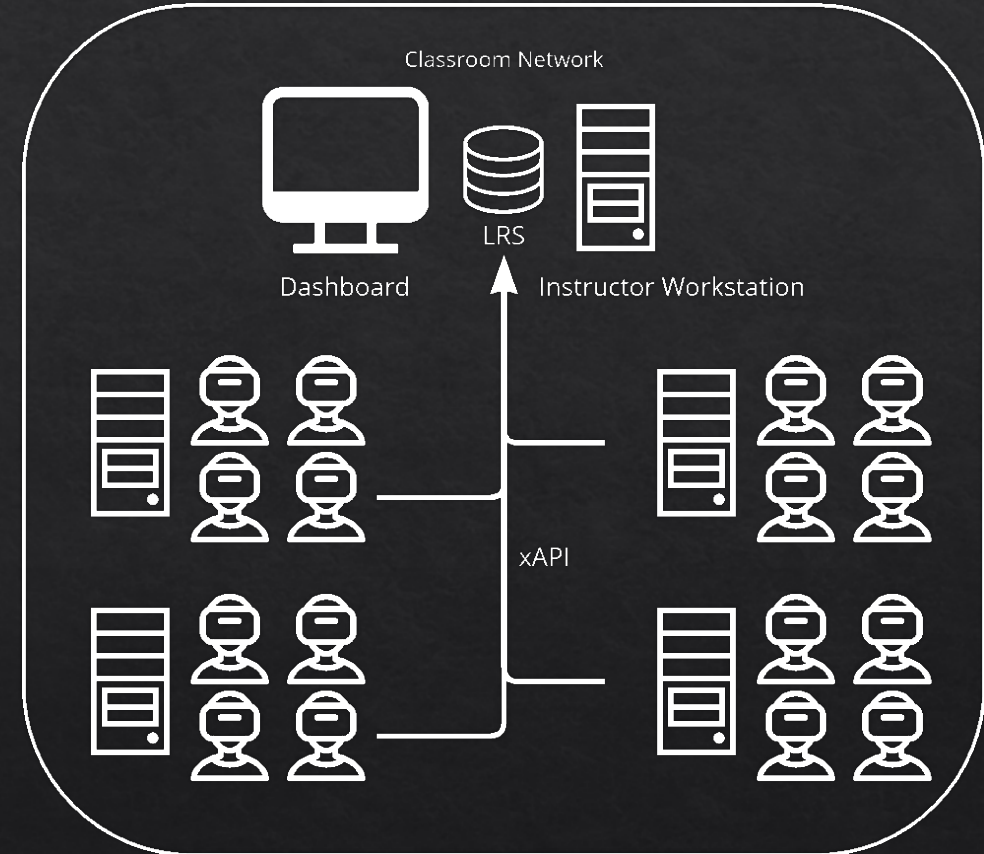

# End Result

- ◆ We have neither the time nor the money to overcome the challenges to meet our training need on schedule
- ◆ We will skip student tracking this time
- ◆ Next time, we'll be ready!!

# Alternative Solution?

- ◆ Closed Network xAPI
- ◆ Still utilize xAPI technology
- ◆ LRS Dashboard installed on the Instructor Workstation
- ◆ Wired or Wireless network access from PCs, tablets, or training devices
- ◆ Data is stored for future import into final LRS solution

# Virtual Reality Student Tracking Solution

# Learner Performance Dashboard

## Select a Report

Explore history of student VR sessions.

[Student Session History](#)

View average student performance on a specific task.

[Average Student Ratings by Task](#)

View average student session duration on a specific task.

[Average Student Duration by Task](#)

Archive data for students without recent sessions.
