# Learning Throughout the Lifespan

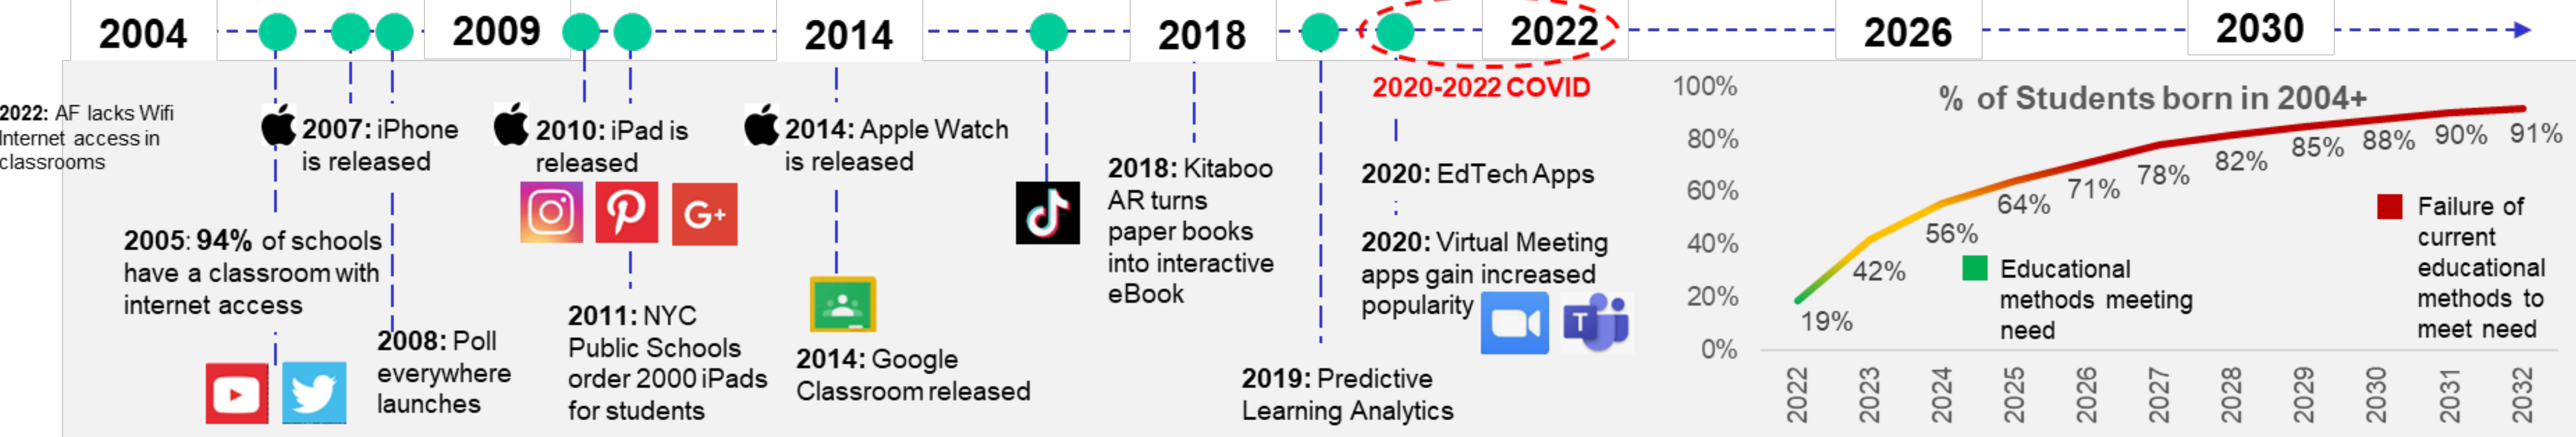

Medial Cortex Development

Prefrontal Cortex Development

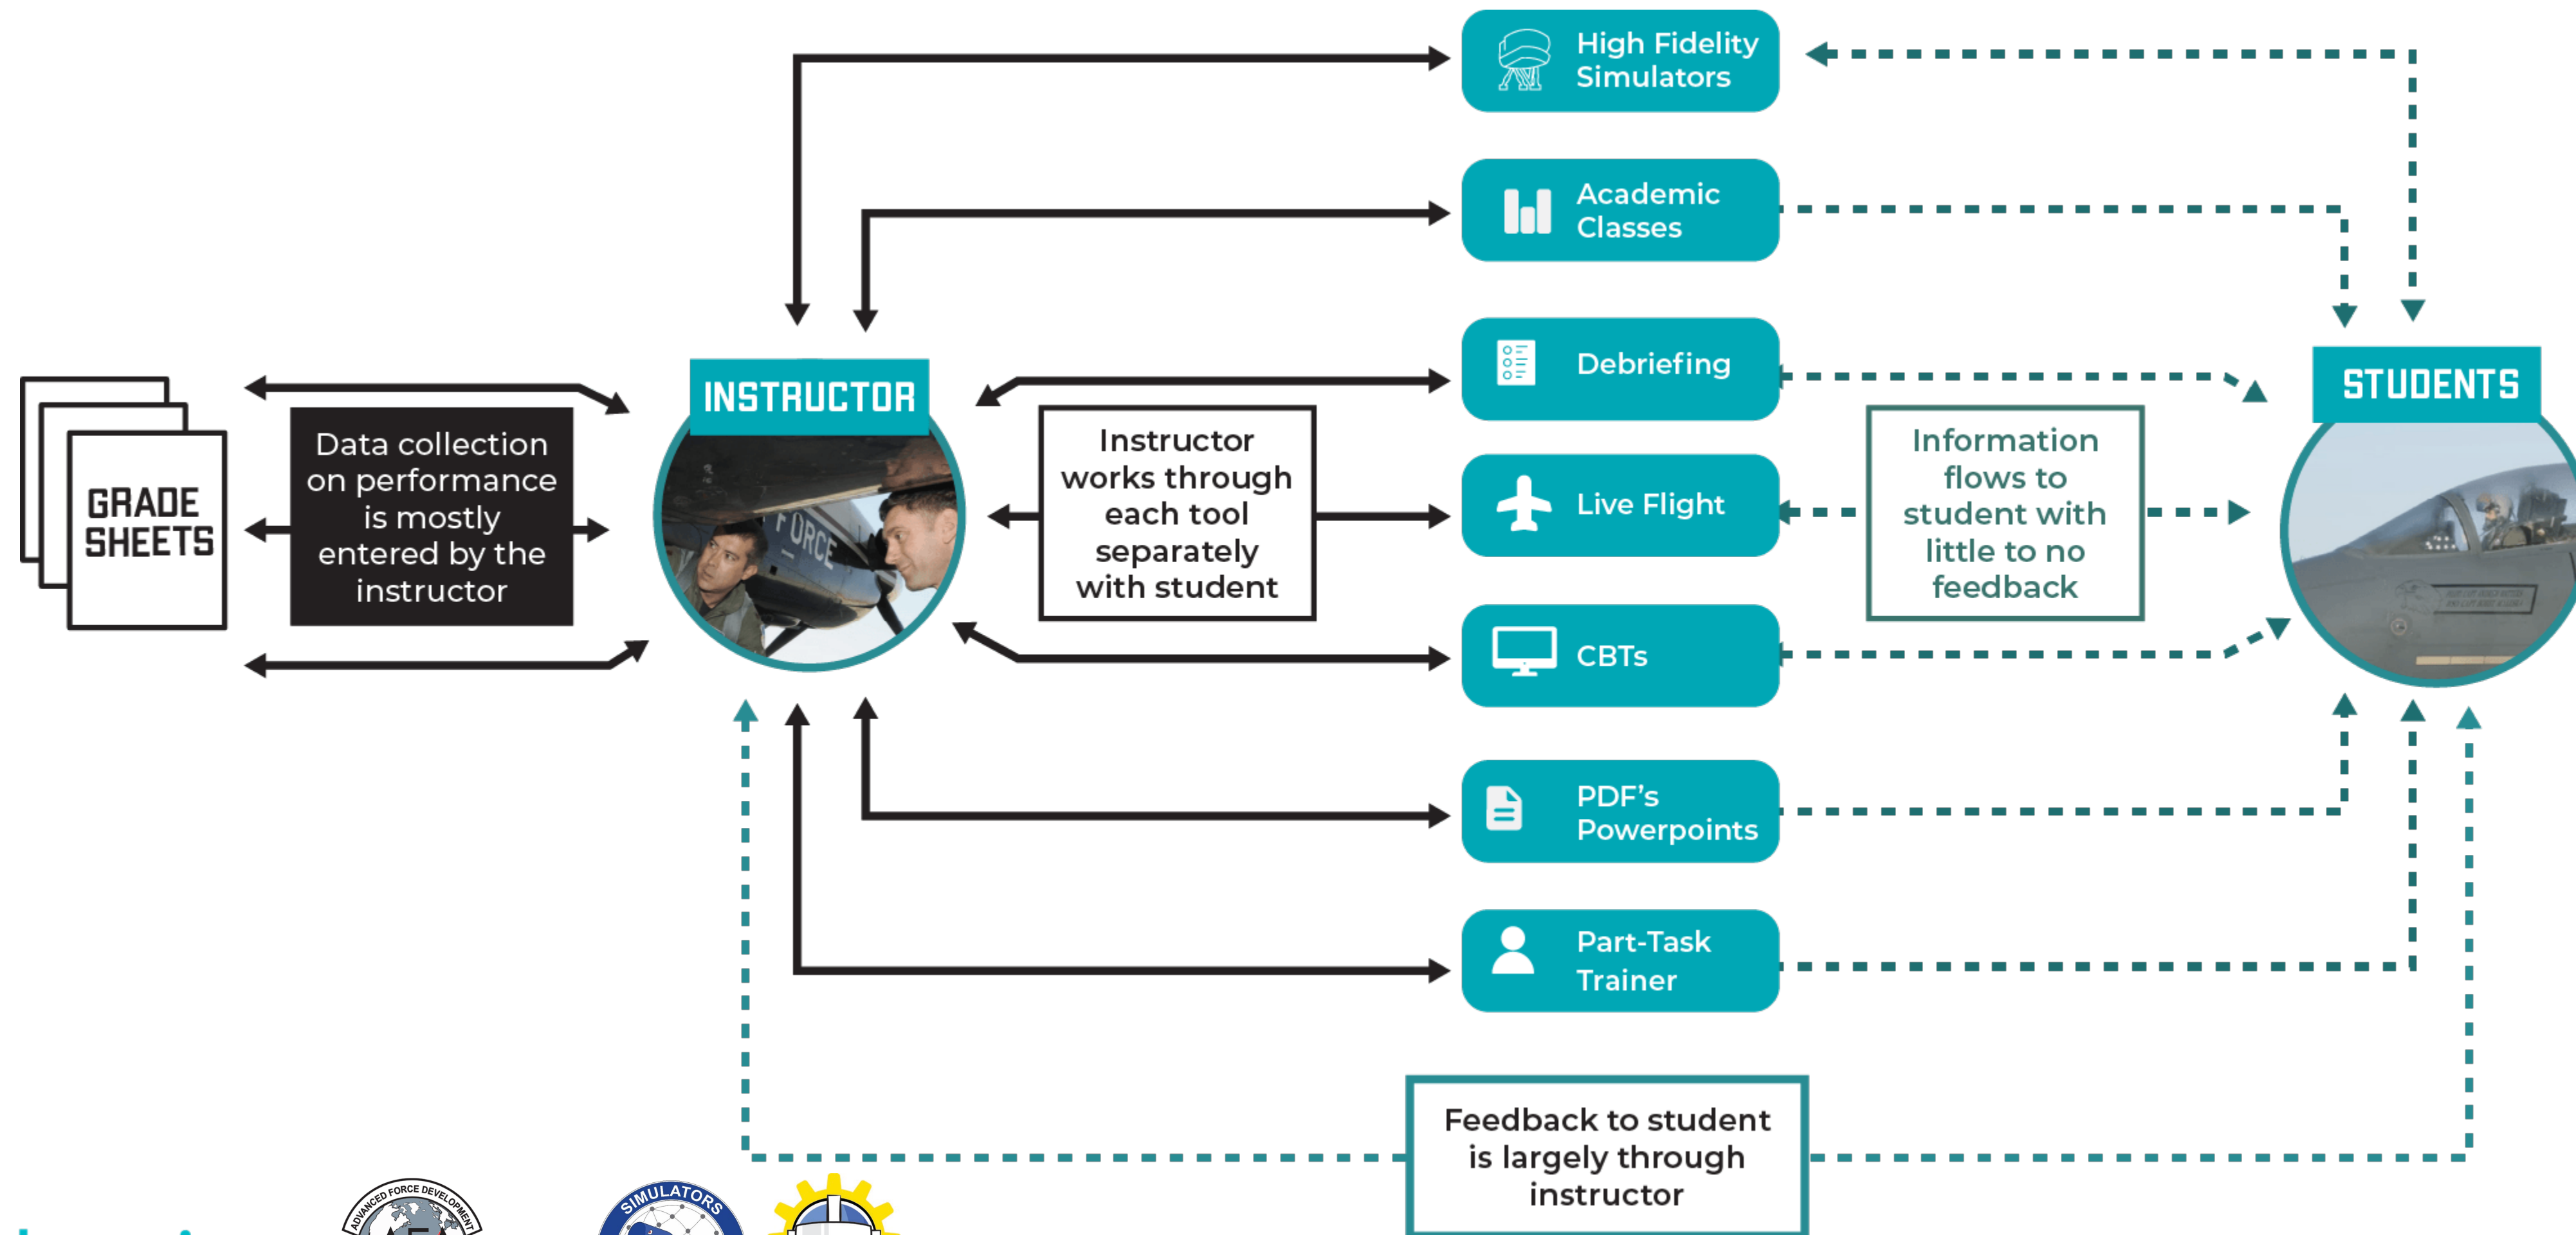

## Education Technology Evolution

# Typical Training Process Today

Stove-Piped Systems. Manual Processes. Difficult to Update. Limited Metrics

# Enter The Metaverse

---

- Not a new concept but has reached pop culture status
  - Everyone has different definitions!
- A digital representation and network of virtual worlds where social experiences across domains exist
- Training in the metaverse?
  - Simply refers to a digital network where immersive training can live...
  - No single or cohesive metaverse at this point
  - This talk will focus on one aspect of the 'metaverse' – Extended Reality (XR)

# DoD and XR Training

XR Training is being used across the services!

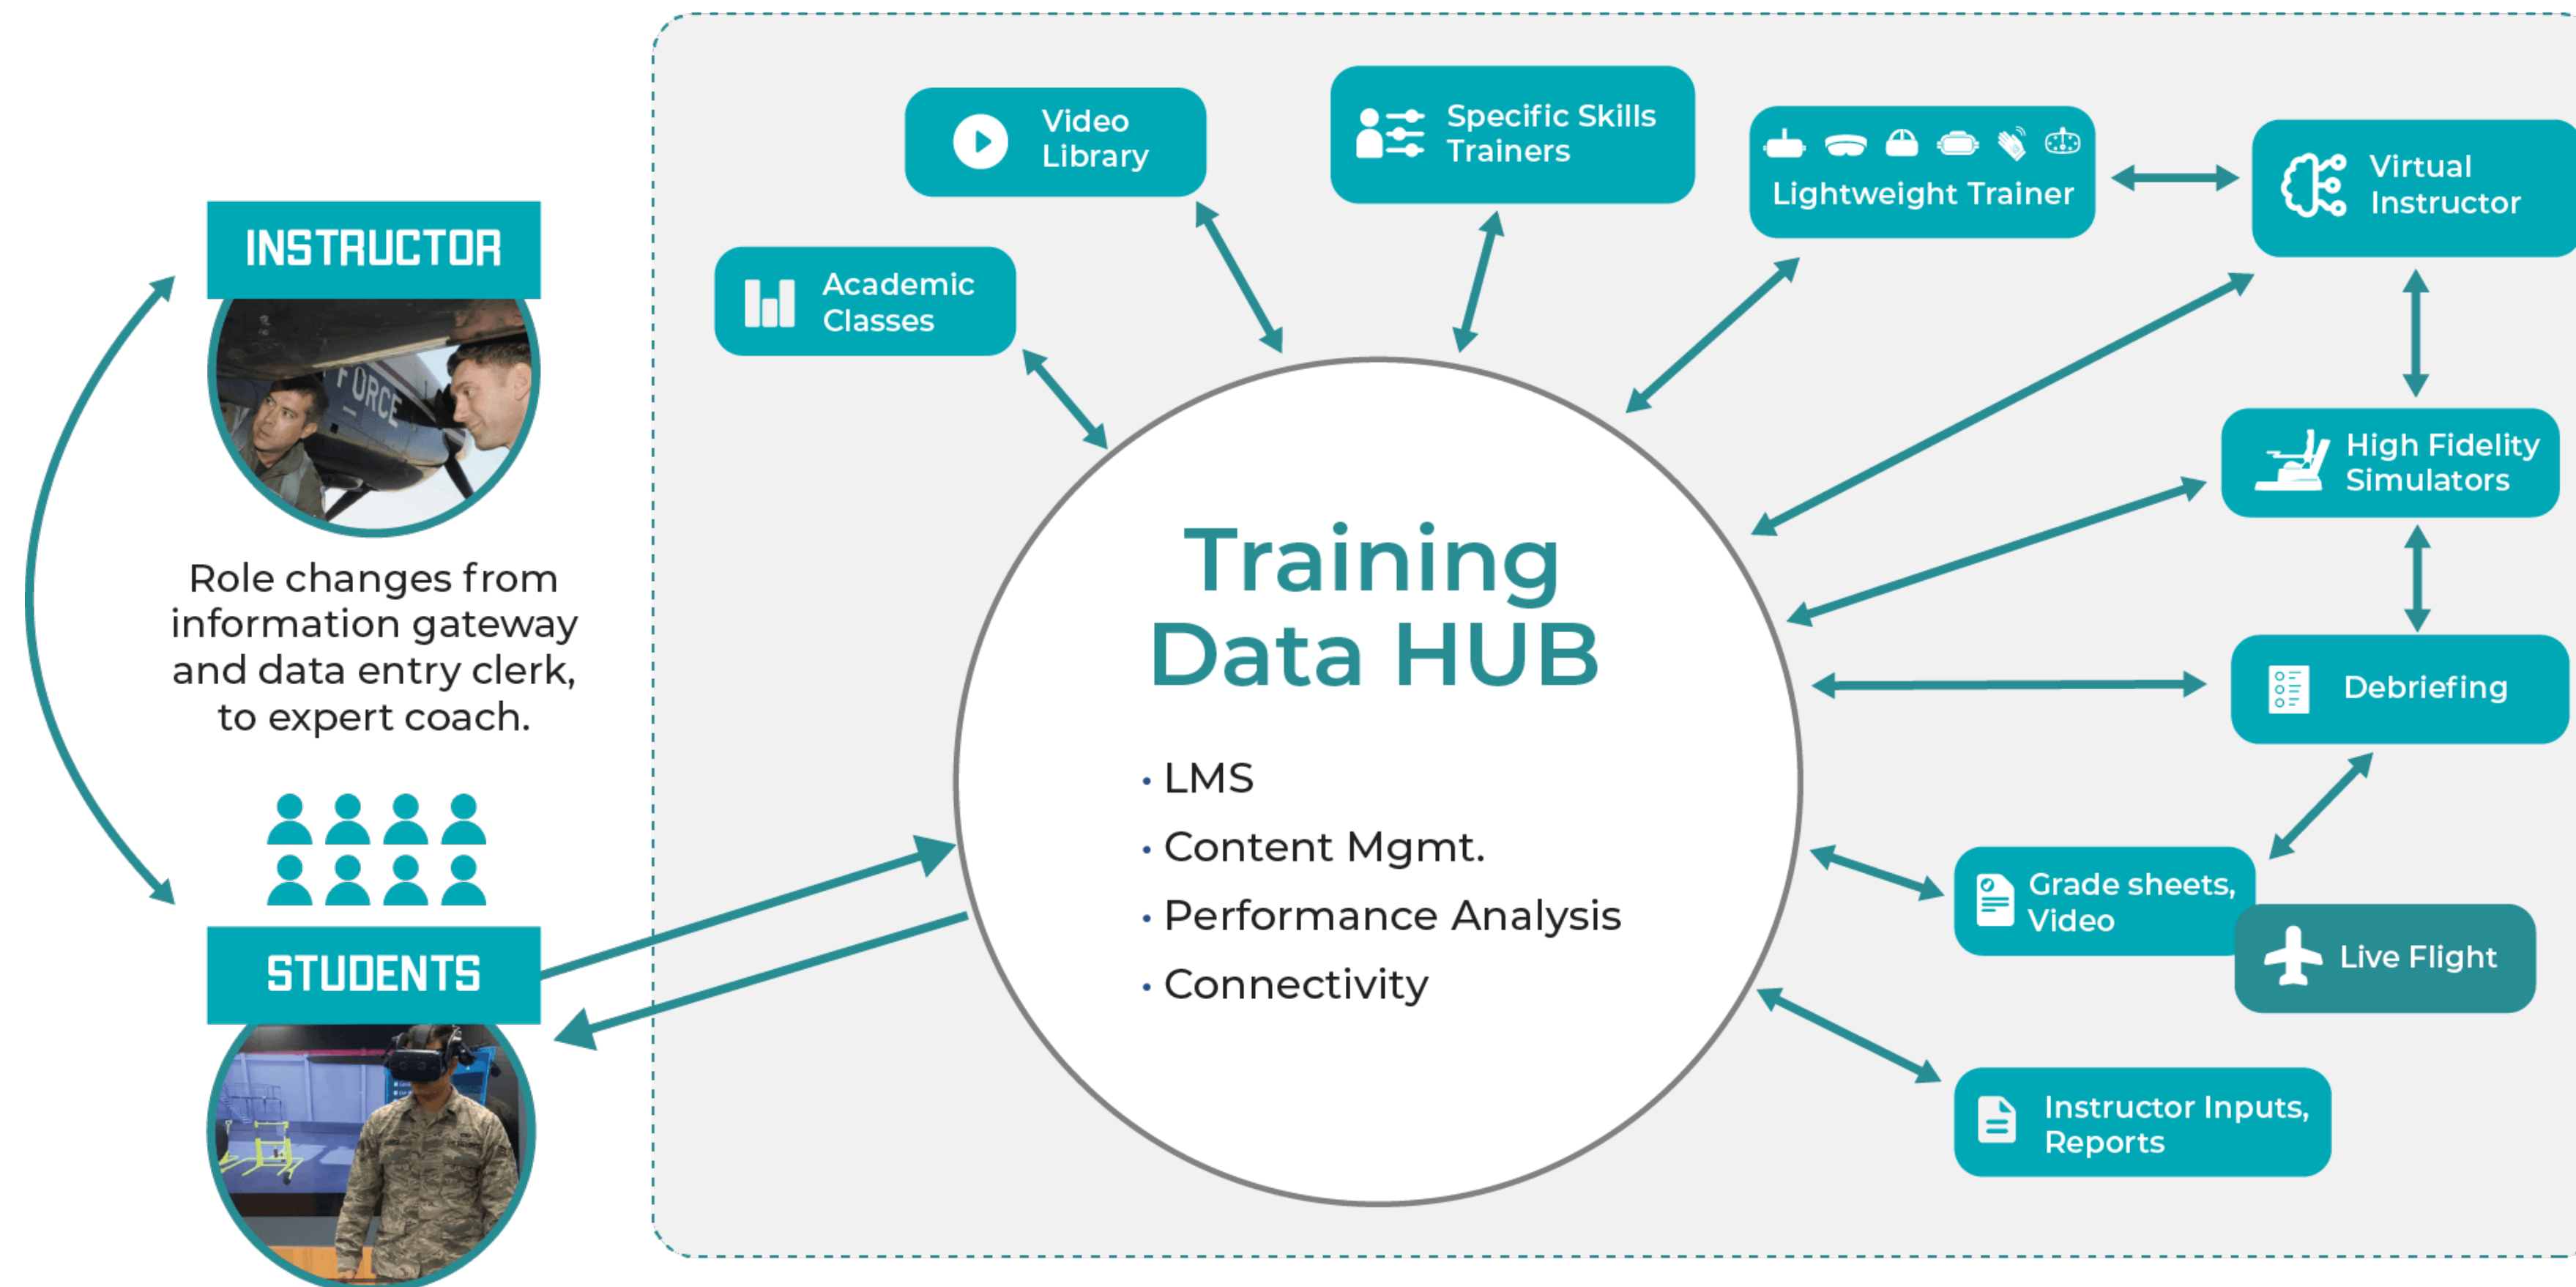

# Challenges With XR Training

---

- 01 Lack of infrastructure to track, host, and report the training data outcomes
- 02 XR training solutions are stove-piped
- 03 Lack of system integration between XR training technologies and the standard LMSs

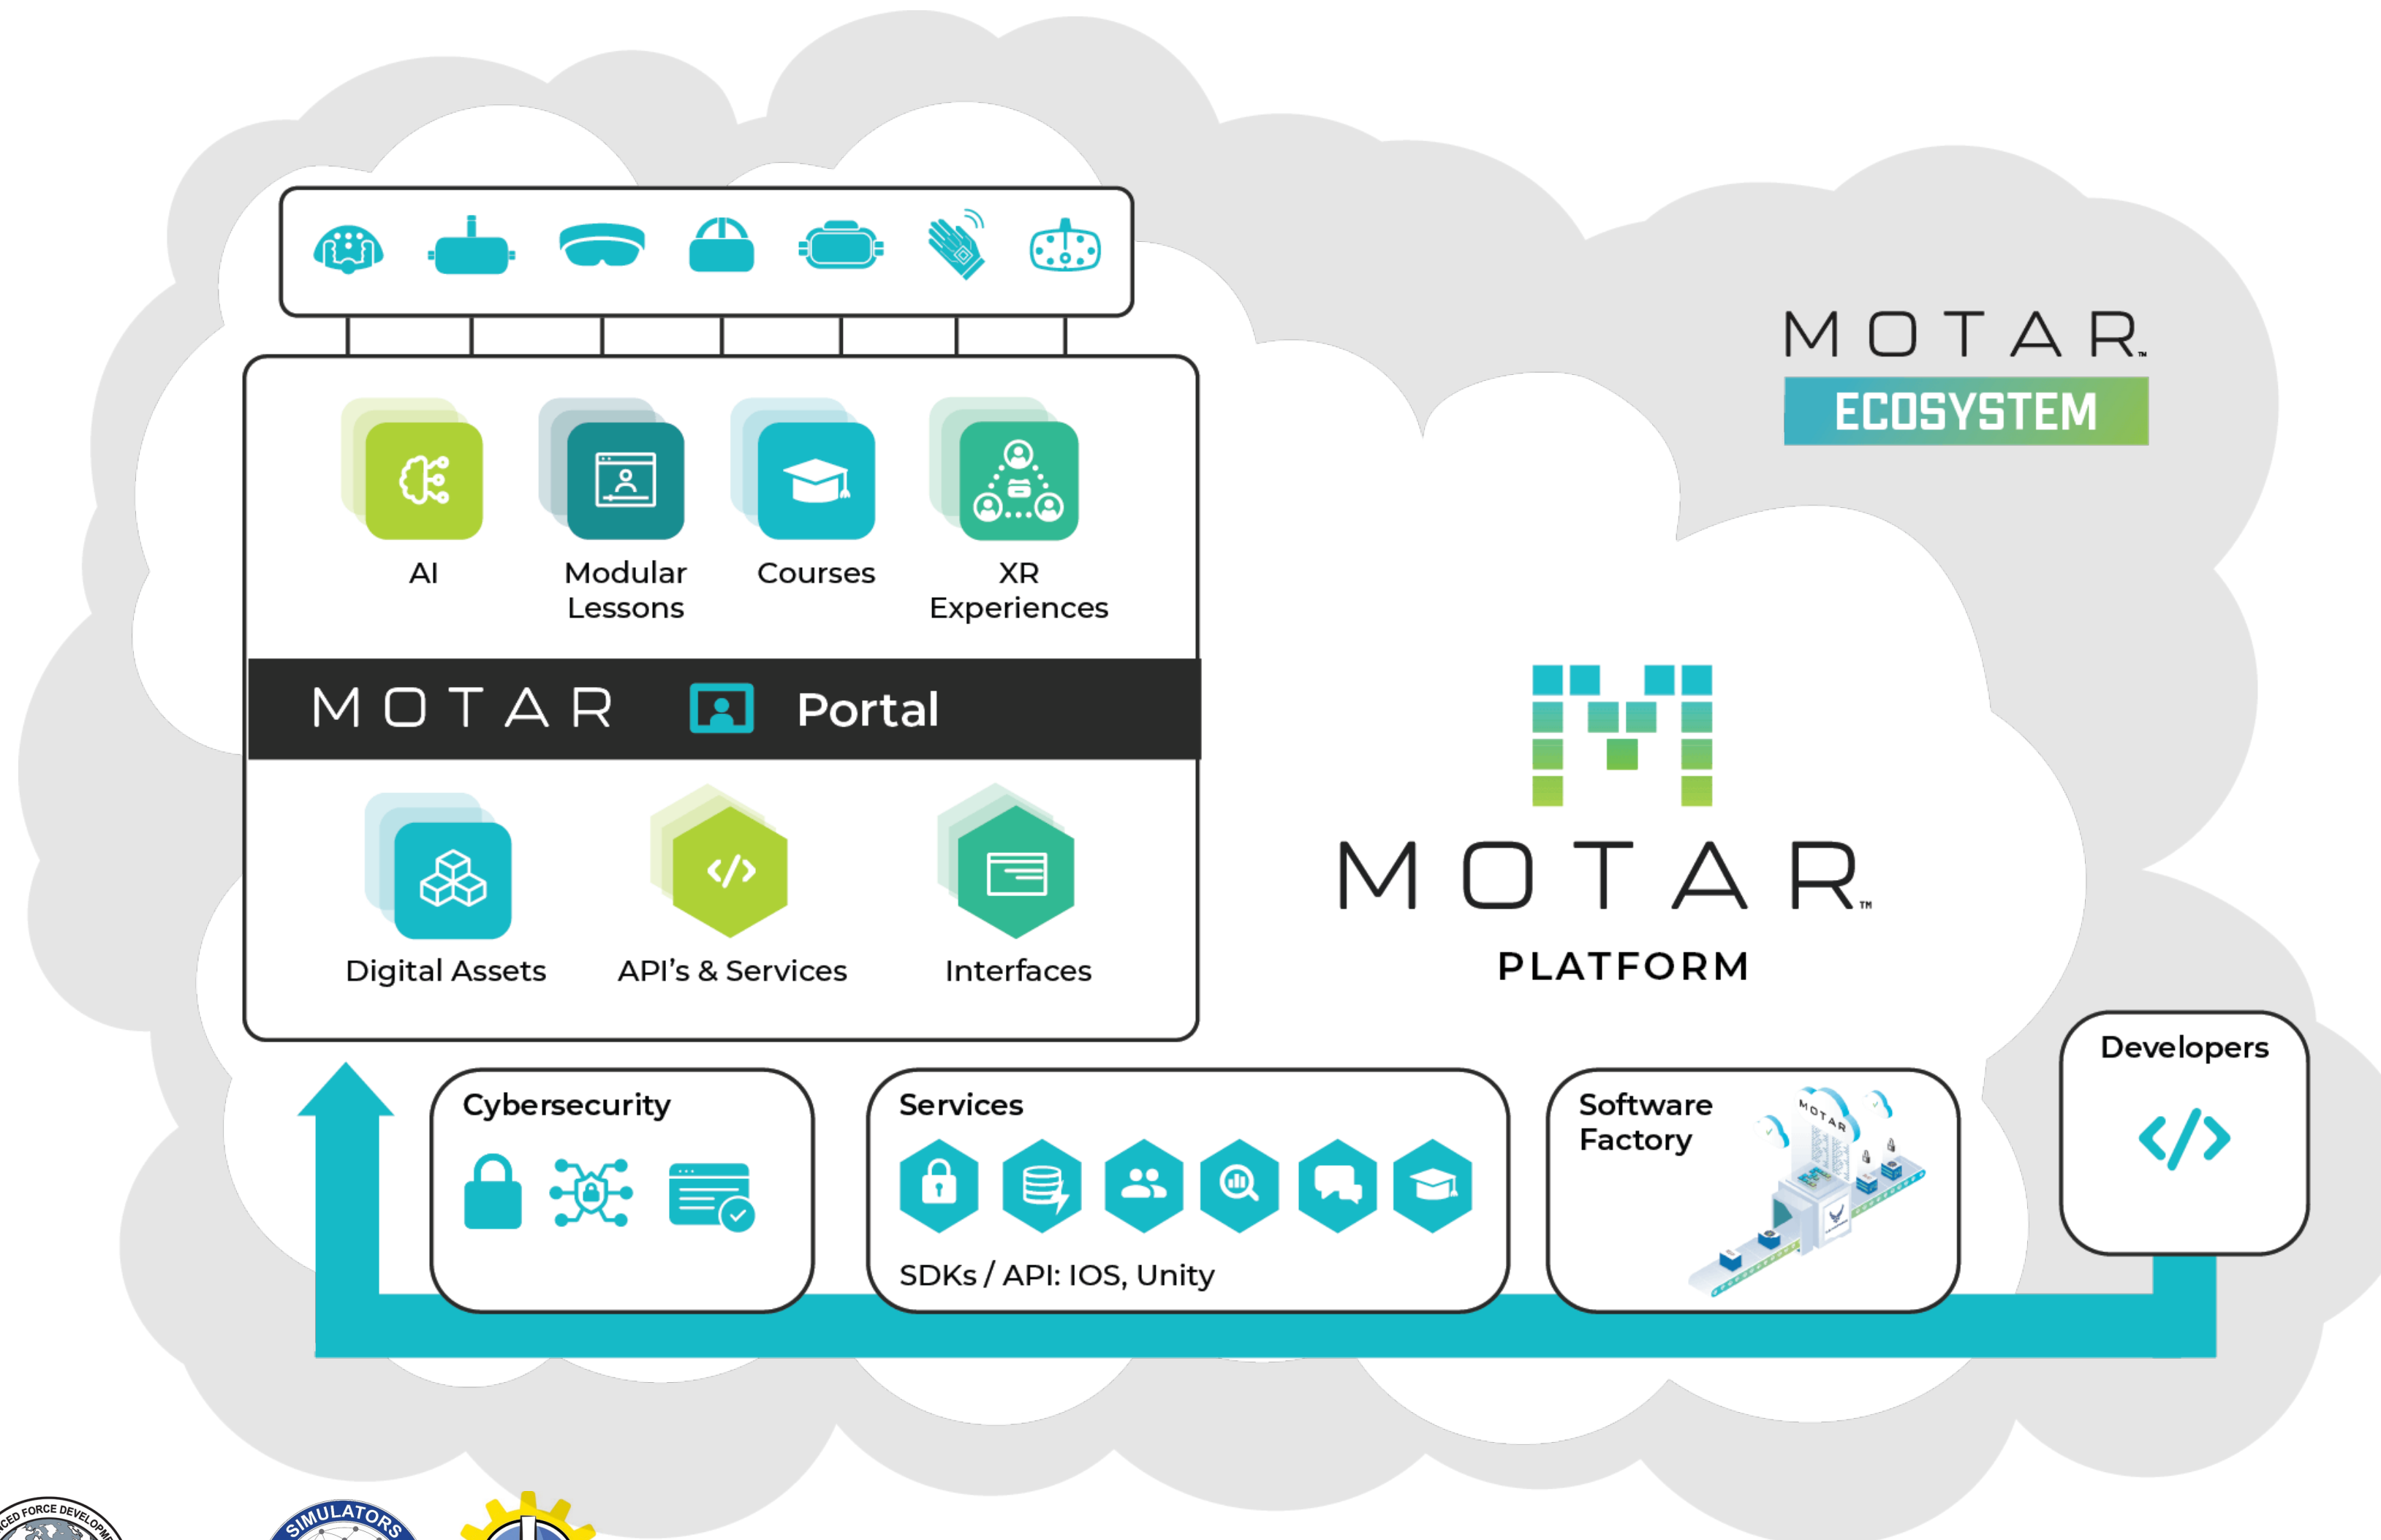

# Future Vision For Air Force Lightweight Sims Ecosystem (LSE)

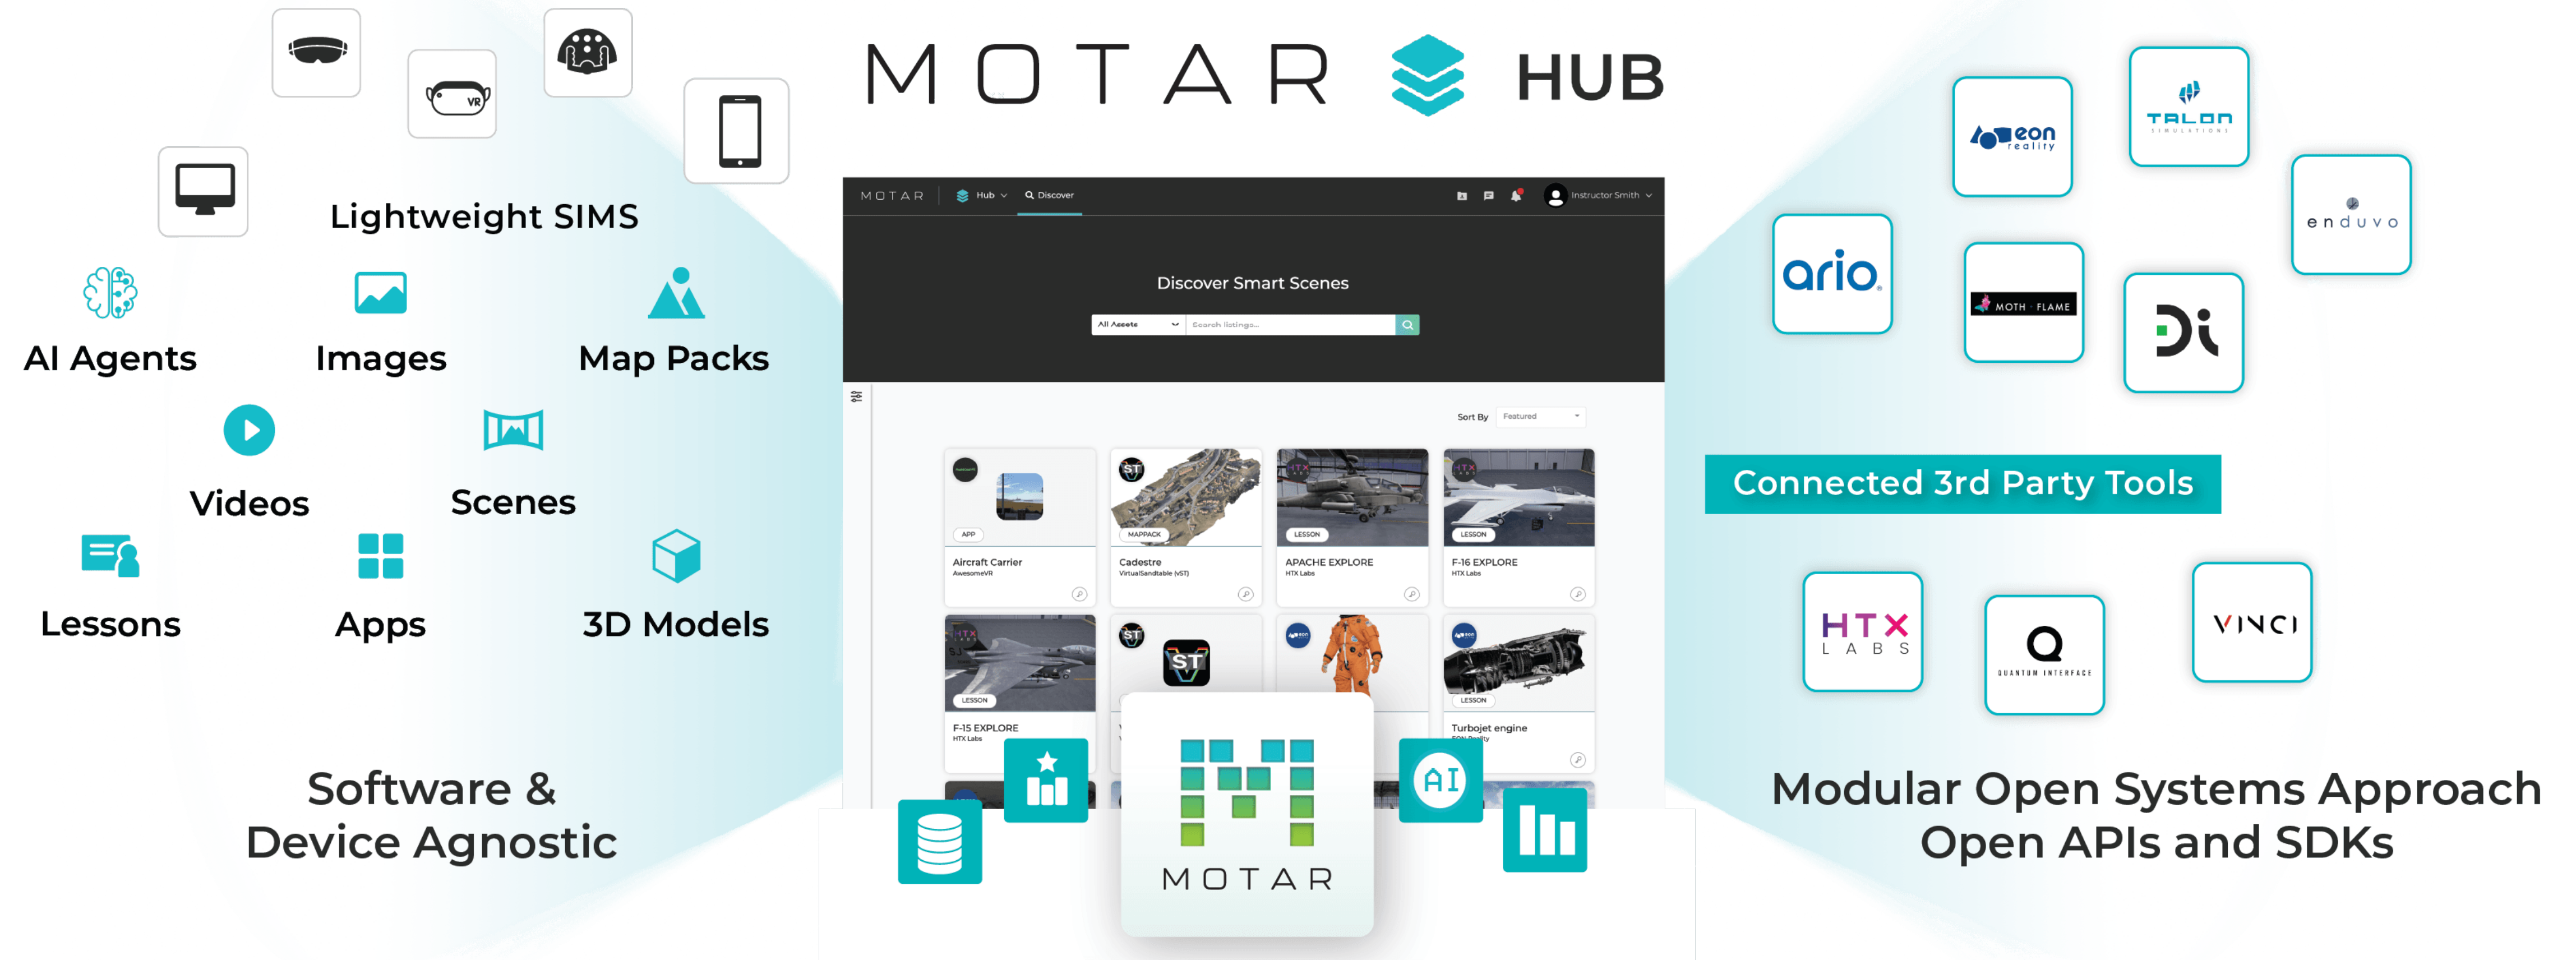

Future is Data Centric, with networked tools that assist Instructors, and provides students with self-executed training options.

# Building an Open Ecosystem

# Implementing the Vision

# Delivering XR Training

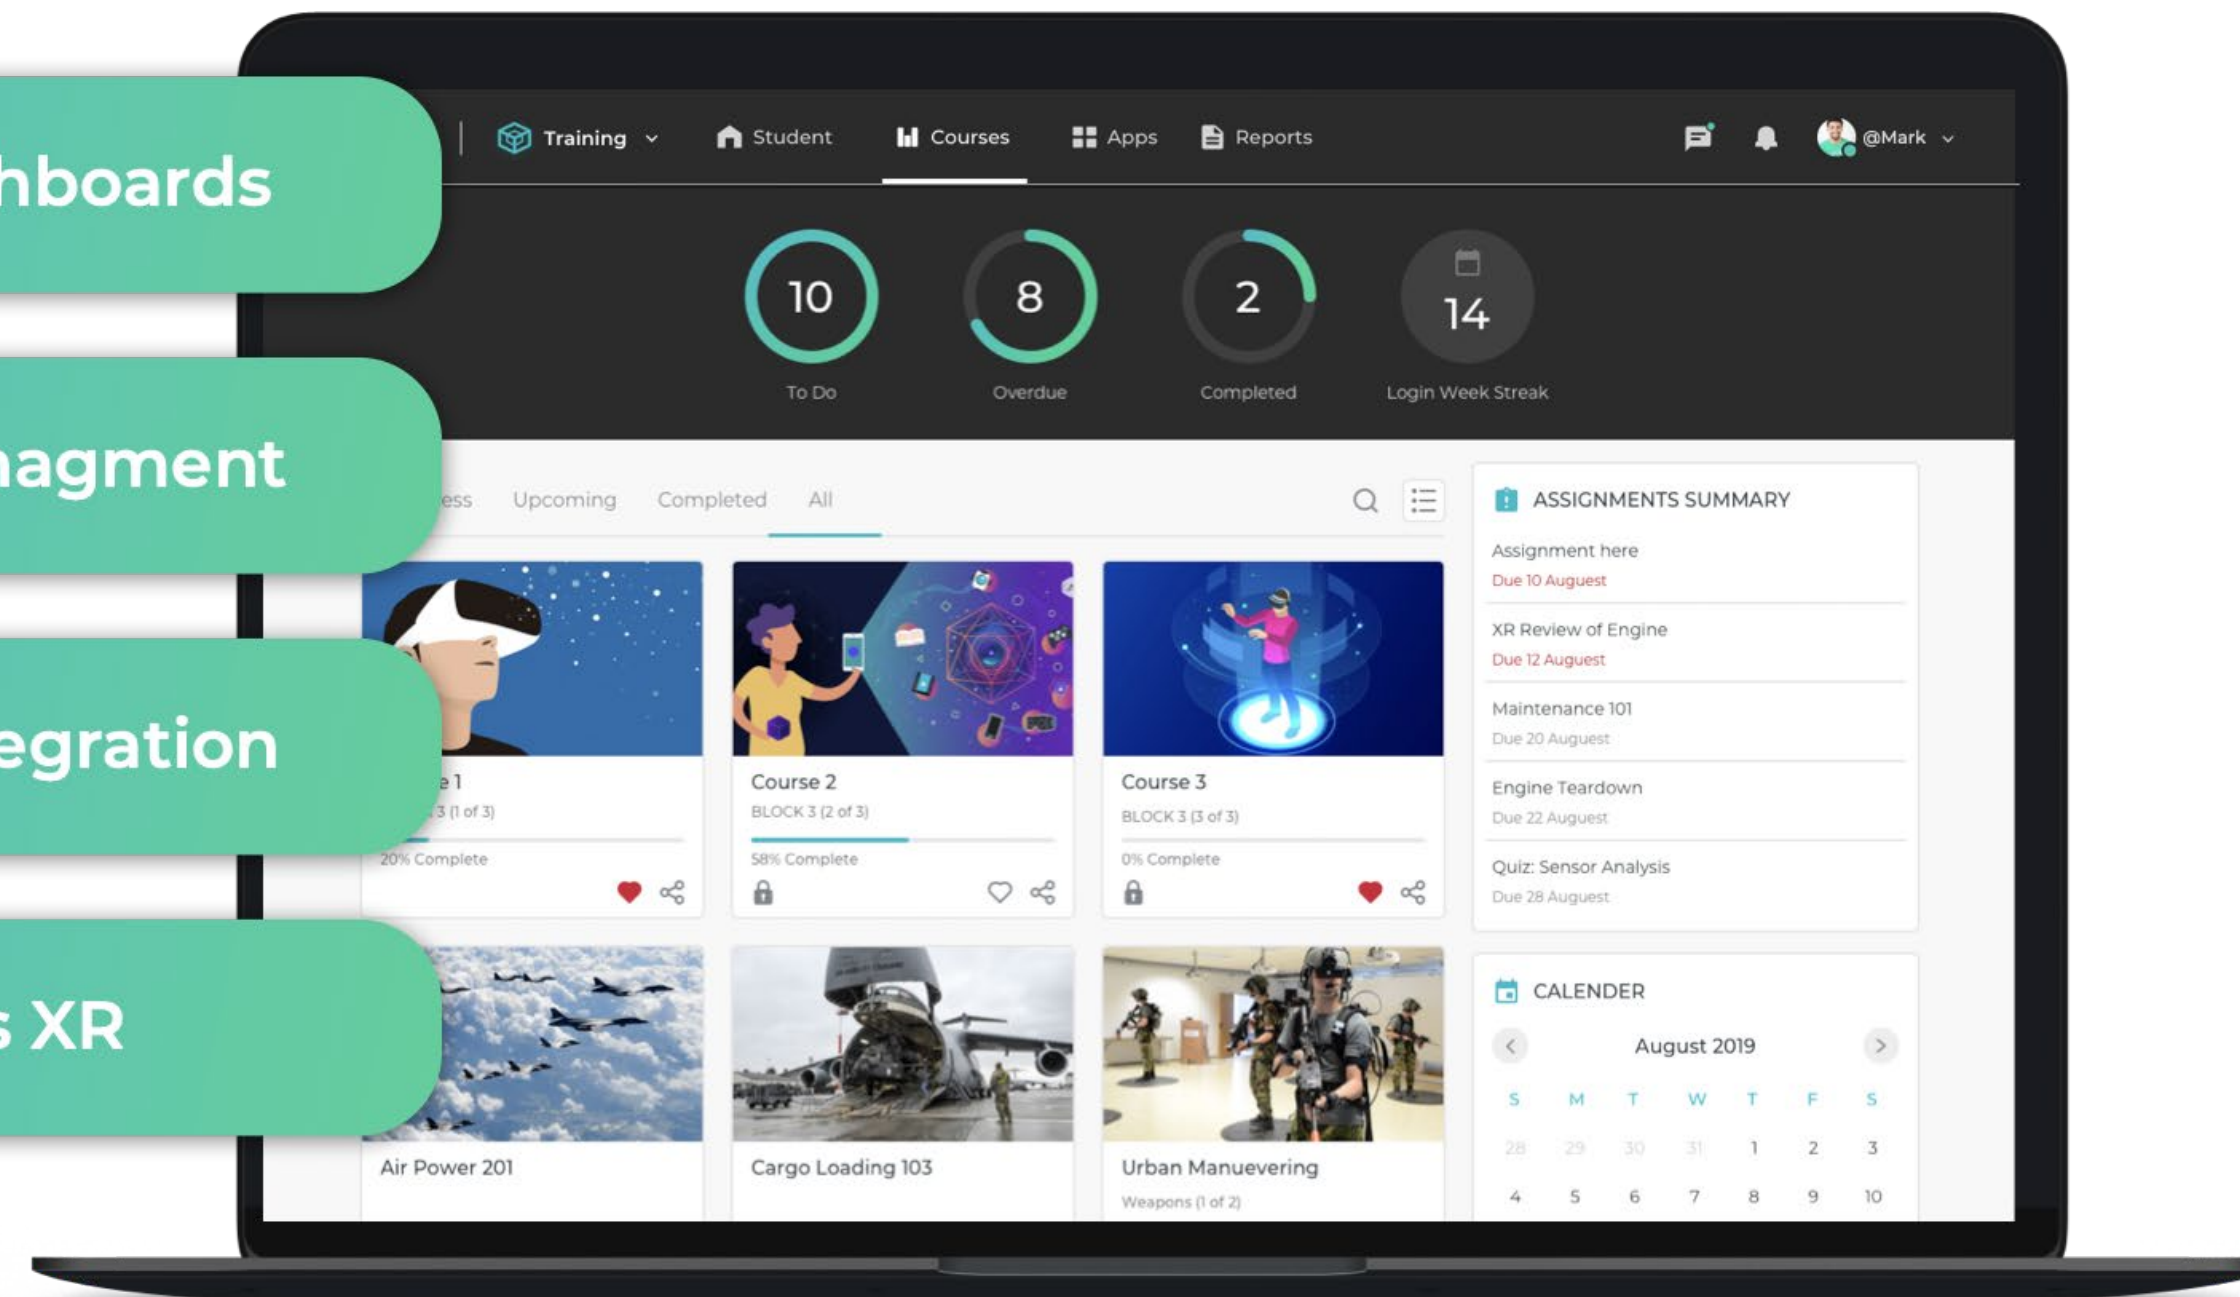

MOTAR is delivering XR content and reporting data through xAPI industry standards for total interoperability

Training Dashboards

Learning Management

SDK / API Integration

Supports XR

# Realizing Benefits

- Pilot program with MOTAR – Crew Chief Fundamentals Course
  - Powered 4 XR company's training content in one seamless experience
  - Students completed the course 42% faster than traditional instruction
  - No performance trade-offs!
  - Saves approximately \$27,000 per airmen

*The DoD is revolutionizing the mechanism for delivering and reporting XR training  
enabling a new metaverse for military training!*
